Using Powershell

Administration with Windows PowerShell

- Brandon Shell
 - General IT Guy

Powershell Overview

- Powershell, Whats the difference?
- Powershell Discovery Commands
- Creating Custom Objects
- Questions
- Useful Exchange Tools
- Useful AD cmdlets

Why Powershell?

- Object Based
 - What is an Object? (Car Example)
 - Properties (Type, Color, Brand)
 - Methods (Start, Stop, Turn)
- Get-ChildItem Demo
 - List all files bigger than 10mb
 - List all files older than 1mon
 - Cool-Demo.ps1

Powershell Commands

- Get-Help
 - Get help for CMDLets and Key Concepts
 - Get-Help <CMDLet> -full
- Get-Member
 - Used to tell you what the object has to offer
 - Properties / Methods
 - Object Type
- Get-Command
 - Gets a list of cmdlets, functions, applications

Custom Objects

- Paradigm Shift
 - Putting the old way aside
 - Tendency to still deal with text
- Why Use them?
 - Removes the need for parsing text
 - With objects you can filter

How to Create Custom Objects

- Select-Object
 - Converts to PSCustomObject
 - When to Use.
- Add-Member
 - The 'Official' way
 - When to Use.

Select-Object

- Converts to PSCustomObject
- Not meant for creating objects but for filtering what output is sent to files or the pipe.
- Great when you know exactly what you want.
- Demo

Add-Member

- Official CMDLet for extending Objects
- Doesn't Create object. It extends. Use New-Object to create object.
- Can add all sorts of members like (NoteProperty and scriptmethods)
- Great for Dynamic Data
- Demo

Useful Exchange tools

- PowerGui from Quest
 - Its free!
 - Its easy.
 - Lets take a look
- Another tool

Useful Active Directory Tools

- Quest AD Cmdlets
 - Get-QADUser
 - Get-QADComputer
 - Get-QADGroup
- SMDSoftware GPO cmdlets
- New-SDMgpo
- Export-SDMgpo
